Quantifiers CAT Academy

Started in
2019

Produced **28,**
99+ %ilers out of the
total ~275 students
taught

Managed by the three
musketeers **Rohit Kanwar, Sahil
Arora & Jasneet Dua** who are
the founders as well as the
Expert Teaching facility with over
20+ years of experience

Helped more than 1 lakh
aspirants achieve their
dreams through their
teachings.

Quantifiers is best known for
their pedagogy, their emphatic
attitude toward every single
student, and for the passion
with which every single
element is driven

Be the part of legacy,
join Quantifiers at
www.quantifiers.in

India's Best CAT Academy,
now also offline in Chandigarh

India's most trusted online/offline coaching

BASIC DEFINITION

- Point:- Point is a circle with 0 radius.
- Line:- line is a set of point having only length in a fixed direction. Minimum two point is required to draw a line.

- Ray:- Ray has a fixed starting point but has not a fixed end point.

Lawyer

*Well, I'm not asking you to believe my words but go and witness yourself. I was a member of Quantifiers Whatsapp group, I was simply taken aback by the way every doubt was solved instantaneously, how can someone be awake 24*7. I have personally seen doubts getting solved at 2/3/4 in the night. I took up the course in June and my journey was never the same, I can ensure you the amount of personal attention you get there, you can't get anywhere. I mentioned it to Sahil Sir too that I never felt that there is a teacher teaching at the other side, it was always like, an elder brother, who has been guiding/scolding me, the motivational sessions, the workshops every aspect that you can think of was taken care to perfection. QA was my biggest fear, I remember scoring in single digits in my initial mocks, but thanks to Quantifiers for believing in me, making me realize that nothing is impossible. It will not be an injustice to say that these guys worked harder than us, pushing us every single day, giving us regular tasks, DILR sets, RCs. The most important part is, we were never taught the questions which were irrelevant from exam perspective, sometimes I found some questions in mocks which were alien to me, but thanks to the mentoring, I was always aligned to what actually came in CAT. QA is a tough section for non-engineers they say, I disapprove that, but trust me, the more classes I attended, the less I believed the statement, we were always told that "P&C nahi ayega aisa, Binomial me time waste naai kro". Special focus on Arithmetic, Geometry and Algebra played a pivotal role in my scores, The booster sessions were cherry on the cake, it was like every concept knocked our brain and entered. DILR focus was a different level, the variety we practiced made sure that we have covered everything that could be, as a result I was able to solve 4 sets on D-day. Finally, I will again ask you to just join Quantifiers without a doubt and witness the magic.*

Thanking Quantifiers

Adios

TRIANGLE

- A figure surrounded by three sides is called triangle.

$$\angle A + \angle B + \angle C = 180$$

- Triangles have three vertex (A, B & C).
- It has three sides (AB, BC & CA).
- It has three interior angles $\angle A$, $\angle B$, $\angle C$.
- The sum of three interior angle is 180 degree.
- The sum of three exterior angle of a triangle is 360 degree.

$$\angle \alpha + \angle \beta + \angle \gamma = 360^\circ$$

#PROBLEM - MAJOR PROBLEM

Speed!, I study the topic - I understand it, but when I practice I am not able to solve questions, I self-doubt and a lot more, am I even worth IIMs?

Comrade, we at Quantifiers follow a three-layer system. Layer 1 - complete the lecture and on the same night/next day, revise it, after that, take a day gap and do the same lecture again to grasp the concept, after that easy questions - tough questions, chapter wise test, it will get you there!!

Dhruva - a non-engineer and a full time lawyer cracked every possible exam with us, got into IIM Ahmedabad - so can you! Just strategize

I need to attempt a maximum number of questions to get 99.99%ile

You don't have to attempt all the questions! Yes, there are a total of 66 questions, the key here is to attempt a specific amount for example but in CAT 2023, an attempt of total

Manali (our student) cracked CAT Exam despite getting 4 correct QA questions and got into IIM C. So can you, believe in yourself.

Section		Section		Section		Total	
Verbal Ability & Reading Comprehension		Data Interpretation & Logical Reasoning		Quantitative Ability		Total	
Scaled Score	Percentile	Scaled Score	Percentile	Scaled Score	Percentile	Overall Scaled Score	Overall Percentile
51.10	99.87	23.99	98.25	11.74	87.99	86.83	99.60

Fill this Google form to receive Daily targets in your WhatsApp
<https://forms.gle/oSih8jQCermJq71q9>

CAT is meant for Engineers and only engineer make it to IIMs

False, There is a diversity factor that every college needs to maintain! Cherry on top, Even from a non-engineer background, you can still ace the CAT exam.

Pallav (our student) cracked CAT Exam despite being from commerce background and got into IIM A. So can you, believe in yourself.

TYPES OF TRIANGLE (BASED ON SIDES)

- Equilateral triangle:- It has three equal sides. All three angles are equal (60 degree).
 $AB=BC=CA$

$$\angle A = \angle B = \angle C = 60^\circ$$

- Isosceles triangle:- It has two equal sides. Angle opposite to equal sides are equal.
 $AB=BC \neq CA$

$$\angle B = \angle C \neq \angle A$$

- Scalene triangle:- It has no equal sides. No angles are equal.
 $AB \neq BC \neq CA$

$$\angle A \neq \angle B \neq \angle C$$

AREA OF TRIANGLE

- If three sides of triangle are given then we used Heron's formula.

$$A = \sqrt{s(s-a)(s-b)(s-c)}$$

Underroot is on entire formula

Also, $s = \text{semiperimeter} = (a+b+c)/2$

- If one side and perpendicular height is given

$$\text{area of triangle} = \frac{1}{2} \times \text{base} \times \text{height} = \frac{1}{2}ah_1 = \frac{1}{2}bh_2 = \frac{1}{2}ch_3$$

$$a \times h_1 = b \times h_2 = c \times h_3 = \text{constant}$$

$$h_1 : h_2 : h_3 = 1/a : 1/b : 1/c$$

CEVIANS AND ANGLE BISECTOR

- The line vertex of a triangle to its opposite sides are called cevians.

- A line which bisect the angle in two equal part is called angle bisector (AD, BE, CF).
- Angle bisector is also a cevian.
- Where all three bisector met, that point is called in- center.

MEDIANS

- If the midpoint of any side in a triangle is joined with the opposite vertex, then it will be called median.
- AD is the median of side BC, BE is the median of AC & CF is the median AB.

- Where three median met that point (o) is called centroid.

INTRODUCTION TO ISOSCELES TRIANGLE

- Two sides of an isosceles triangle are equal. Two angles of triangle are equal.
- Median divides the triangle into two equal congruent triangles.
- The altitude, median, angle bisector of an isosceles triangle are all the same line (AD).
- Therefore its in-centre, orthocenter, circum-centre and centroid are at the same line.

$$\text{Height} = \text{median} = AD = \frac{\sqrt{4(a \times a) - (b \times b)}}{2}$$

$$\text{area} = \frac{b}{4} \sqrt{4(a \times a) - (b \times b)}$$
